PROBLEM

On Wednesday morning, the Wi-Fi network at my school stopped working for two hours during a lesson.

ACTIONS TAKEN

A network technician was asked to check the problem. First, he checked the router settings. He noticed that DHCP and other settings were deactivated.

RESULT

As a result, he activated the default settings of the router. After that, all the devices at the school worked correctly, and the Wi-Fi connection was back to normal.

RECOMMENDATION

It is recommended to set user permissions and disable automatic beta updates to avoid similar problems in the future and keep the network safe and working well.
